Bestpool High Irradiance Infrared Therapy Lamp

Treatment Guideline

It is important to use your light consistently. We recommend using your light everyday, light therapy is like food for your cells. For best results, please positioning your light about 3 to 8 inches from the area on your body or skin that you want to treat. Treatment Time:15-30 minutes session per day and at least 5 times per week.

High Power Output (Irradiance) Infrared Therapy Lamp

HOW IT WORKS FOR YOUR SKIN?

NASA medical experiments have shown that under the illumination of LEDs with a wavelength of 660-850nm, the dermis layer can be effectively stimulated, and collagen production is several times greater than that of normal human cells.

Collagen regeneration, wrinkle reduction

Barrier repair, improve face blood circulation

Fine pores, brighten skin tone

Firming the skin

Your light works by sending out red & near infrared light in a certain range (660nm & 850nm) of therapeutic wavelength and intensity. This treatment generates a number of health benefits because red light therapy increases production of adenosine triphosphate, which enhances cellular energy production and elevates protein synthesis.

Infrared Therapy Lamp

Wound healing

Lumbar muscle strain

Female problem

- Increased natural collagen production
- Reduce joint pain and inflammation
- Speeds healing
- Faster muscle recovery
- Healing injuries, wounds, diminishes scars and burns
- Improve sleep quality

Cervical Pain

Joint pain

Leg strain

Muscle ache

Regalo familiar, ayudante saludable

Product size

Specification

Product Name: Infrared Therapy Lamp
Model No: VL-RL-FRR36W01
Wattage: 36W
Voltage: AC100-240V 50/60Hz
Red LED: 660nm
Infrared LED: 850nm
Material: Aluminum + PC
Working Life: 35000h
IP Grade: IP20
Certificates: CE/RoHS/FCC/FDA

Frequently Asked Questions

Q: How to use my light?

A: Since red light therapy brings energy for your cells, we recommend using your light everyday. 20-30 minutes session for each treatment 2 times to 14 times per week. For optimal results, please position your light about 3 to 8 inches from your treatment area.

Q: Does it have any side-effect by using light therapy treatments?

A: In numerous clinical studies, red and near infrared light has been proven that it is safe, natural, non-invasive treatment. Patients experienced less pain and inflammation injuries and medical procedures. All without the side effects and major health risks you get with prescription pain meds and invasive procedures.
